Problem

The 375 Mission Support Group never knew what the weather was outside because their vertical blinds prevented them from seeing out. In addition, the Commander was also forced to keep the blinds closed in his office for the glare the light would throw on his monitor. The conference room represented a problem as well because the verticals did not allow for complete light block, a requirement for high levels of FPCON. In addition the Support Group was interested in reducing heat and saving energy.

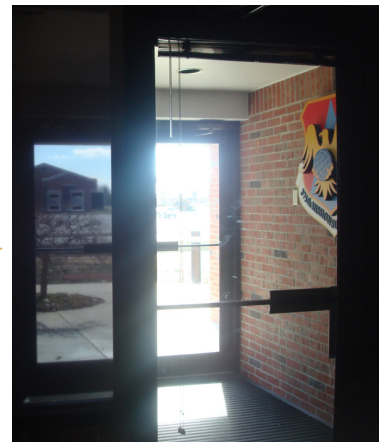

Solution

The staff turned to Halcyon Shades for a practical, full service solution with installation. A dual roller shade system was chosen; one with radiant barrier material, the other a 100% black out. The Commander's office received high-end motorized shades. A special side rail system was designed for the conference room allowing for 100% privacy and achieving FPCON DELTA compliance. Glare and heat are now completely controlled.
